Physician - Follow up Visit encounter performed at Health Services.

SUBJECTIVE:

COMPLAINT 1 Provider: Benitez, J. (MAT) MD

Chief Complaint: GENERAL

Subjective: follow up for abnormal lab (12/15/21)- repeat PSA still elevated 9.47. Compared to prior PSA 13.52 (12/8/21). Admits to family history for prostate cancer- father passed away at age 67 due to it. Inmate George currently is 57y.
Also indicates was treated cancerous colon polyps- 2006. No further follow up since then. denies any changes in weight or appetite. no fevers/chills. No back pain and changes in BM. Admits to frequent urination (note: U/A: wnl, 12/8/21).

Separately indicates was exposed to HCV x6 years ago due to IVDU. But since then has cleared it naturally.
note: BP elevated- despite taking medication and agrees to adjustment - no chest pain or SOB.

Physician - Medical Trip Return encounter performed at Health Services.

SUBJECTIVE:

COMPLAINT 1 Provider: Gill, Naveed (MAT) MD,CD

Chief Complaint: Medical Trip Return

Subjective: inmate returned last evening from same day surgery after a prostate biopsy. Inmate is still catheterized. C/O pain and discomfort due to the catheter. No paper work available to be reviewed. As per inmate he needs to go back to the clinic in 2 weeks. As per inmate he has been passing copious amounts of clear urine. At this time inmate was counseled on how the catheter will be removed. 10 CC Syringe used to deflate balloon. Catheter removed without any discomfort or complication. Inmate advised to hydrate and let health services know if unable to void in the next 3 hours. Inmate understands. Started on antibiotics and pain medications and placed on providers schedule.

CLINICAL INFORMATION / HISTORY: 60-year-old male with newly diagnosed prostate cancer and an elevated PSA suspicious for metastasis.

INDICATION: Initial staging

EXAMINATION: NM TUMOR IMAG PET W/CT SKULL TO MIDTHIGH, 10/19/2022 12:30 PM, NM220014285

COMPARISON: None.

TECHNIQUE: 6.55 millicuries of 68-Ga-gozetotide (PSMA-11) was administered via a right antecubital IV. Following 65 minutes of uptake time, PET-CT images were acquired from the mid-thighs through the skull base with arms above the head and. This protocol was chosen based on clinical information provided by the referring physician. A diagnostic quality CT scan utilizing 93 cc Isovue-370 IV contrast was used for attenuation correction. Digital PET acquisition was performed of the same field of view. Rotating MIP reformatted images were also created for review.

FINDINGS:

QUALITY of the study is good.

HEAD AND NECK:

There is intense physiologic activity in the lacrimal and salivary glands. There is low-grade physiologic activity in the larynx, thyroid, and nasal mucosal. Faint activity within the intracranial dural venous sinuses reflects residual blood pool activity.

Date of Birth: 9/9/1962

Radiology

Read

Faint blood pool activity is physiologic. Faint physiologic activity is present at the cervicothoracic (stellate) ganglia.

Noncalcified pulmonary nodules are favored benign:

- 4 mm right middle lobe nodule, image 418 series 3
- 9 mm major fissure nodule, image 422 series 3
- 7 mm nodule right minor fissure, image 431 series 3
- 5 x 11 mm left upper lobe nodule, image 370 series 3

ABDOMEN AND PELVIS:

There is physiologic intense renal activity without focal masses. No hydronephrosis. There is intense excreted tracer within the urinary bladder.

Tracer avid foci are noted within both the right and left prostate suspicious for malignancy.

Tracer avid nodes representing nodal metastasis:

- Right internal iliac, image 233 series 1401
- Left external iliac, image 229 series 1401
- Left common iliac, image 218 series 1401
- Right common iliac, image 216 series 1401
- Left common iliac, image 211 series 1401
- Right pericaval, image 193 series 1201
- Left periaortic, image 193 series 1401
- Left periaortic, image 189 series 1401
- Left periaortic, image 187 series 1401
- Left periaortic, image 181 series 1401

Mild physiologic activity is present at the celiac ganglia and sacral ganglia.

Physiologic heterogeneous moderate to intense activity is present in the liver and spleen. There is mild physiologic small bowel activity.

MUSCULOSKELETAL:

- Subtle foci within bones are nonspecific:
- Cervical spine, image 55 series 1401
- Left posterior third rib, image 74 series 1401

IMPRESSION:

1. Tracer avid foci within both the right and left prostate suspicious for prostate malignancy.
2. Bilateral pelvic and retroperitoneal nodal metastasis.
3. Subtle tracer avid foci within the cervical spine and left posterior third rib could represent osseous metastasis but this is not a confident diagnosis as there are no suspicious bone lesions on CT and there are no significant pelvic or other spinal skeletal lesions to favor metastasis.
4. Small pulmonary lesions are favored benign. These can be followed with CT to confirm stability on future surveillance

Radiology

Read

"This patient may be released based on the guidelines established in the state Division of Radiological Health regulations, Release of Patients Containing Radioactive Drugs or Implants."

Procedure performed with dual-headed camera and completed using appropriate computer software.

All CT scans at this facility use dose modulation, iterative reconstruction, and/or weight-based dosing when appropriate to reduce radiation dose to as low as reasonably achievable.

Date of Birth: 09/09/1962	Provider: Bernard, Andrew PharmD	Facility: MEM
Encounter Date: 01/20/2023 15:48		Unit: D06

Pharmacy Note - Comprehensive Clinic encounter performed at Health Services.

SUBJECTIVE:

COMPLAINT 1 Provider: Bernard, Andrew PharmD

Chief Complaint: Oncology

Subjective: Pt with metastatic prostate cancer here to receive medication and counseling on his condition and medication. Clinical Director present for visit.

Pain: Not Applicable

OBJECTIVE:

Blood Pressure:

<u>Date</u>	<u>Time</u>	<u>Value</u>	<u>Location</u>	<u>Position</u>	<u>Cuff Size</u>	<u>Provider</u>
01/20/2023	15:49	MEM	123/70			Bernard, Andrew PharmD

Comments

Pt diagnosed several months ago with metastatic prostate cancer on biopsy. MD ordered medication Xtandi, NFR approved, medication ordered yesterday and received today. No records from Oncologist found. Will follow up with this next week.

Counseled pt on his condition, likelihood of cure, need for transfer to appropriate care level, and plan of treatment going forward. Pt to start Xtandi today. Pt states he received an injectible hormone while at the doctor that would last 6 months. Eligard (Leuprolide) was ordered as we were aware that another medication besides Xtandi was necessary, but had no records indicating which was recommended by the oncologist. Holding order, waiting to make contact with oncologist. Next dose is due in 6 months, around 7/18/23. Consider switch to Eligard at that time after consulting with Oncologist.

Pt states he has bone metastases as well on MRI. Need results of MRI, however a bisphosphonate would be recommended in addition to calcium and his other treatments. Once results return and oncologist can be contacted, we will proceed with plan of care based on their recommendations.

CD stated she would put him in for transfer to a care level 4 facility that is better equipped to treat his condition. Pt advised us that he was denied for compassionate release because of insufficient information, and would be putting back in for it.

ASSESSMENT:

Medication Review

PLAN:

Discontinued Medication Orders:

<u>Rx#</u>	<u>Medication</u>	<u>Order Date</u>
	Leuprolide Acetate Subcutaneous (30 day)	01/20/2023 15:48
	<u>Prescriber Order:</u> 7.5mg Subcutaneously Once a month x 30 day(s) Pill Line Only -- Metastatic prostate cancer treatment - note pt has DM well controlled on Metformin 500mg daily

inmate seen with Pharmacist. Inmate was previously under care of Dr Benitez who no longer works here. This visit was to establish care and come up with a plan for treatment for inmates disseminated prostatic cancer. Inmate counseled for about 30 minutes by clinical pharmacist and CD. Discussed all aspects of chemotherapy, f/u prognosis, alternatives, pain control and comfort measures. Inmate understands. Seems a little apprehensive and anxious which seems appropriate to the gravity of the situation. Will also refer to psychology for support. Will place on MLP schedule monthly to f/u for side effects or worsening of disease.

Schedule:

Administrative Notes:

ADMINISTRATIVE NOTE 1 Provider: Gill, Naveed (MAT) MD,CD

Inmate has a diagnosis of disseminated prostatic cancer. Started on chemotherapy 1/20/23. I assumed his care at that time. Inmate was previously under care of Dr Benitez. Inmate has sparse medical records and notes. Have contacted his oncologist Dr Ahmed and am awaiting his response to form a plan of care. Have also requested his complete records.
Discussed pain management for possible mets to bones. Will start on Cymbalta and Tylenol

New Medication Orders:

<u>Rx#</u>	<u>Medication</u>	<u>Order Date</u>
	DULoxetine Delayed Release Capsule	01/24/2023 13:16
	<u>Prescriber Order:</u> 30 Orally - daily x 180 day(s)
